Suitable for a wide range of applications and processes, the Powertrack 30 complements our extensive range of Powertrack conveyors.

**Features**

- Designed for light/medium duty applications providing a carrying capacity of up to 30kg per pendant with a 3mm wall track section for span loading.
- Modular construction utilising many common components within the Powertrack range enabling easy installation and future alterations and extensions.
- Suitable for operation through areas up to 250 deg. C makes it an ideal choice for all uses including transportation, process and paint finishing applications.
- Fully enclosed track ensures a safe and quiet operation.
- As with the full Powertrack range, the modules are designed for easy installation at high level ensuring optimum free floor space for other operations.
Powertrack 30 - technical specification

Drive
Comprising a caterpillar type drive renowned for smooth surge free power transmission. The unit would be driven by a helical worm drive geared motor unit incorporating a morse friction clutch unit for overload protection of the chain components.

Chain
Incorporating medium duty pendants at 229mm pitch, the sturdy fully bi-planer chain includes articulating joints with steel side plates. Double 41mm diameter wheels are incorporated vertically and horizontally and are fitted with full compliment grade 100 steel ball bearings for optimum efficiency and trackability.

Track Section
Rolled from high quality galvanised steel to form a 50mm nominal square section with 3mm wall thickness with a 12 mm slot. The bolted clamp connectors and hanger clamps facilitate easy installation (including cut down sections).
Bend Sections

Bends (vertical and horizontal) have a standard radius of 610mm – although other radii down to 457mm can be manufactured on request. Bends are available in 15, 30, 45, 60 and 90 degree segments complete with 150mm long connecting lead-ins.

Inspection Section

This would be incorporated in a readily accessible position within the system for easy inspection and carrying out preventative maintenance.

Tension Unit

All chain circuits require the means to set and maintain the correct working tension. To facilitate this, the tension unit comprises a 180 degree bend available with differing track centres to suit the system mounted below a frame with twin springs and lock-off facilities. It is recommended that the unit is incorporated following the drive unit. For extra wide applications linear tension units are utilised.

Lubricator

For long chain life, particularly when operating in high temperatures, lubrication is essential. The lubricator is a pneumatically powered unit which allows pulses of lubricant onto essential components. The unit includes a separate solenoid valve with silencer and regulator. Essential unit piping and connections would be pre-assembled and tested in our works.

**Lubricator details**

- Requires compressed filtered air at 4 – 5 Bar.
- Size of actuating valve inlet is 1/8" BSP/8mm dia tube.
- Reservoir capacity – 1.7 litres.
Powertrack 30

Technical Data

Chainpull. Maximum allowable through the drive is 275kg.
