Suitable for a wide range of applications and processes, the Powertrack 60 complements our extensive range of Powertrack conveyors.

**Features**

Designed for medium duty applications providing a carrying capacity of up to 60kg per pendant with a 4mm wall track section for span loading.

Modular construction utilising many common components within the Powertrack range enabling easy installation and future alterations and extensions.

Suitable for operation through areas up to 250 deg. C makes it an ideal choice for all uses including transportation, process and paint finishing applications.

Fully enclosed track ensures a safe and quiet operation.

As with the full Powertrack range, the modules are designed for easy installation at high level ensuring optimum free floor space for other operations.
Powertrack 60 - technical specification

Drive
Comprising a caterpillar type drive renowned for smooth surge free power transmission. The unit would be driven by a helical worm drive geared motor unit incorporating a morse friction clutch unit for overload protection of the chain components.

Chain
Incorporating medium duty pendants at 229 pitch, the sturdy fully bi-planer chain includes articulating joints with cold rolled steel side plates. Double 48mm diameter wheels are incorporated vertically and horizontally and are fitted with twin steel cage ball bearings for optimum efficiency and trackability.

Track Section
Rolled from high quality galvanised steel to form a 60mm nominal square section with 4mm wall thickness with a 12.5mm slot. The bolted clamp connectors and hanger clamps facilitate easy installation (including cut down sections).
Powertrack 60 - technical specification cont.

Bend Sections

Bends (vertical and horizontal) have a standard radius of 610mm for 229mm pitch chain. Bends are available in 15, 30, 45, 60 and 90 degree segments complete with 150mm long connecting lead-ins.

Inspection Section

This would be incorporated in a readily accessible position within the system for easy inspection and carrying out preventative maintenance.

Tension Unit

All chain circuits require the means to set and maintain the correct working tension. To facilitate this, the tension unit comprises a 180 degree bend available with differing track centres to suit the system mounted below a frame with twin springs and lock-off facilities. It is recommended that the unit is incorporated following the drive unit. For extra wide applications linear tension units are utilised.

Lubricator

For long chain life, particularly when operating in high temperatures, lubrication is essential. The lubricator is a pneumatically powered unit which allows pulses of lubricant onto essential components. The unit includes a separate solenoid valve with silencer and regulator. Essential unit piping and connections would be pre-assembled and tested in our works.

Lubricator details

Requires compressed filtered air at 4 – 5 Bar.
Size of actuating valve inlet is 1/8” BSP/8mm dia tube.
Reservoir capacity – 3.5 litres.
Powertrack 60
Technical Data

Chainpull. Maximum allowable through the drive is 455kg.
